

RUBBER ROLLERS AND PULLEYS

Sioux Rubber & Urethane applies rubber coatings or lagging to virtually any size pulley or roller. Our rubber lagging is vulcanized on to the pulley or roller resulting in a bond that will not pull loose even under extreme conditions (unlike many glued-on materials). Sioux Rubber & Urethane can also strip and recoat your existing rollers at our facility with quick turn around times.

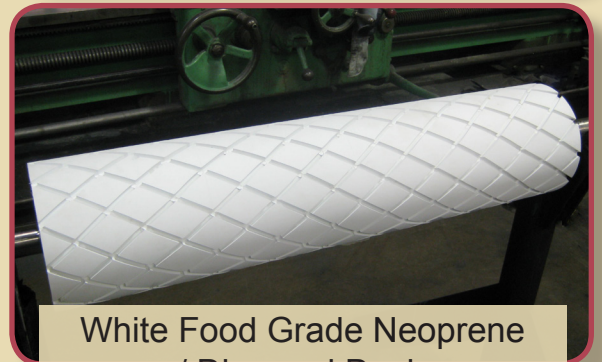

Whether it's a completely new roller or recovering your existing core, Sioux Rubber & Urethane can accommodate most any need and size:

- Coatings available from 0.063" and up in thickness
- Capable of covering rollers up to a 60" diameter and 20' length
- Crowned and/or grooved finishes available
- Fast turn around on all orders
- Special materials or configurations available upon request

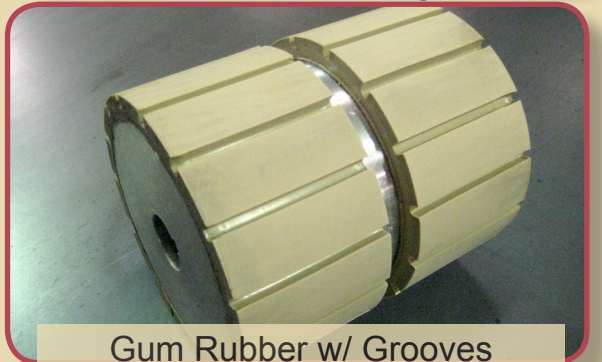

A variety of rubber compounds are available to meet your specific service requirements. Even multi-layer applications are available, such as cushioning soft under-layer with harder rubber on outside surface.

Natural Rubber w/ Dual Taper

White Food Grade Neoprene w/ Diamond Design

Gum Rubber w/ Grooves

SBR Covering
