

PROTECT IT WITH RUBBER™

RUBBER ROLLERS AND PULLEYS

Sioux Rubber & Urethane applies rubber coatings or laggings to virtually any size pulley or roller. Our rubber lagging is vulcanized on to the pulley or roller resulting in a bond that will not pull loose even under extreme conditions (unlike many glued-on materials). Sioux Rubber & Urethane can also strip and recoat your existing rollers at our facility with quick turn around times.

Whether it's a completely new roller or recovering your existing core, Sioux Rubber & Urethane can accommodate most any need and size:

- Rollers up to 18" diameter and up to 120" long as a standard
- Capable of covering rollers up to a 60" diameter and 30' length
- Crowned and/or grooved finishes available upon request
- Most orders are ready to ship out in 3 days
- Special materials or configurations can take a few extra days

Our standard material is 60 durometer SBR, but a variety of other rubber compounds are available to meet your specific service requirements. Even multi-layer applications are available, such as a cushioning soft under-layer with harder rubber on outside surface.

Contact Sioux Rubber & Urethane if you have any questions or would like a price quote.
